Scan DeFi

In early 2021, an incredible event would take place, the shitcoin boom. This fact would grant great opportunities to a few, and great misfortunes for many others. Due to the FOMO, scammers would quickly start to emerge. These would do it through different manners:

1. Allowing the purchase but not the sale of tokens.
2. Allowing the purchase and sale, but configuring the contract in such a way that the owners could take everything at will.
3. Allowing trading correctly, but maintaining an immense amount of the token offer.
4. Allowing the trading of tokens, but cheating with the promises of the project and the roadmap.

Among many others.... Faced with this situation, \$SCAN was born with the aim of adding value to the shitcoin sector, eliminating scammers, and returning lost confidence to investors. To do this, it will carry out different tasks:

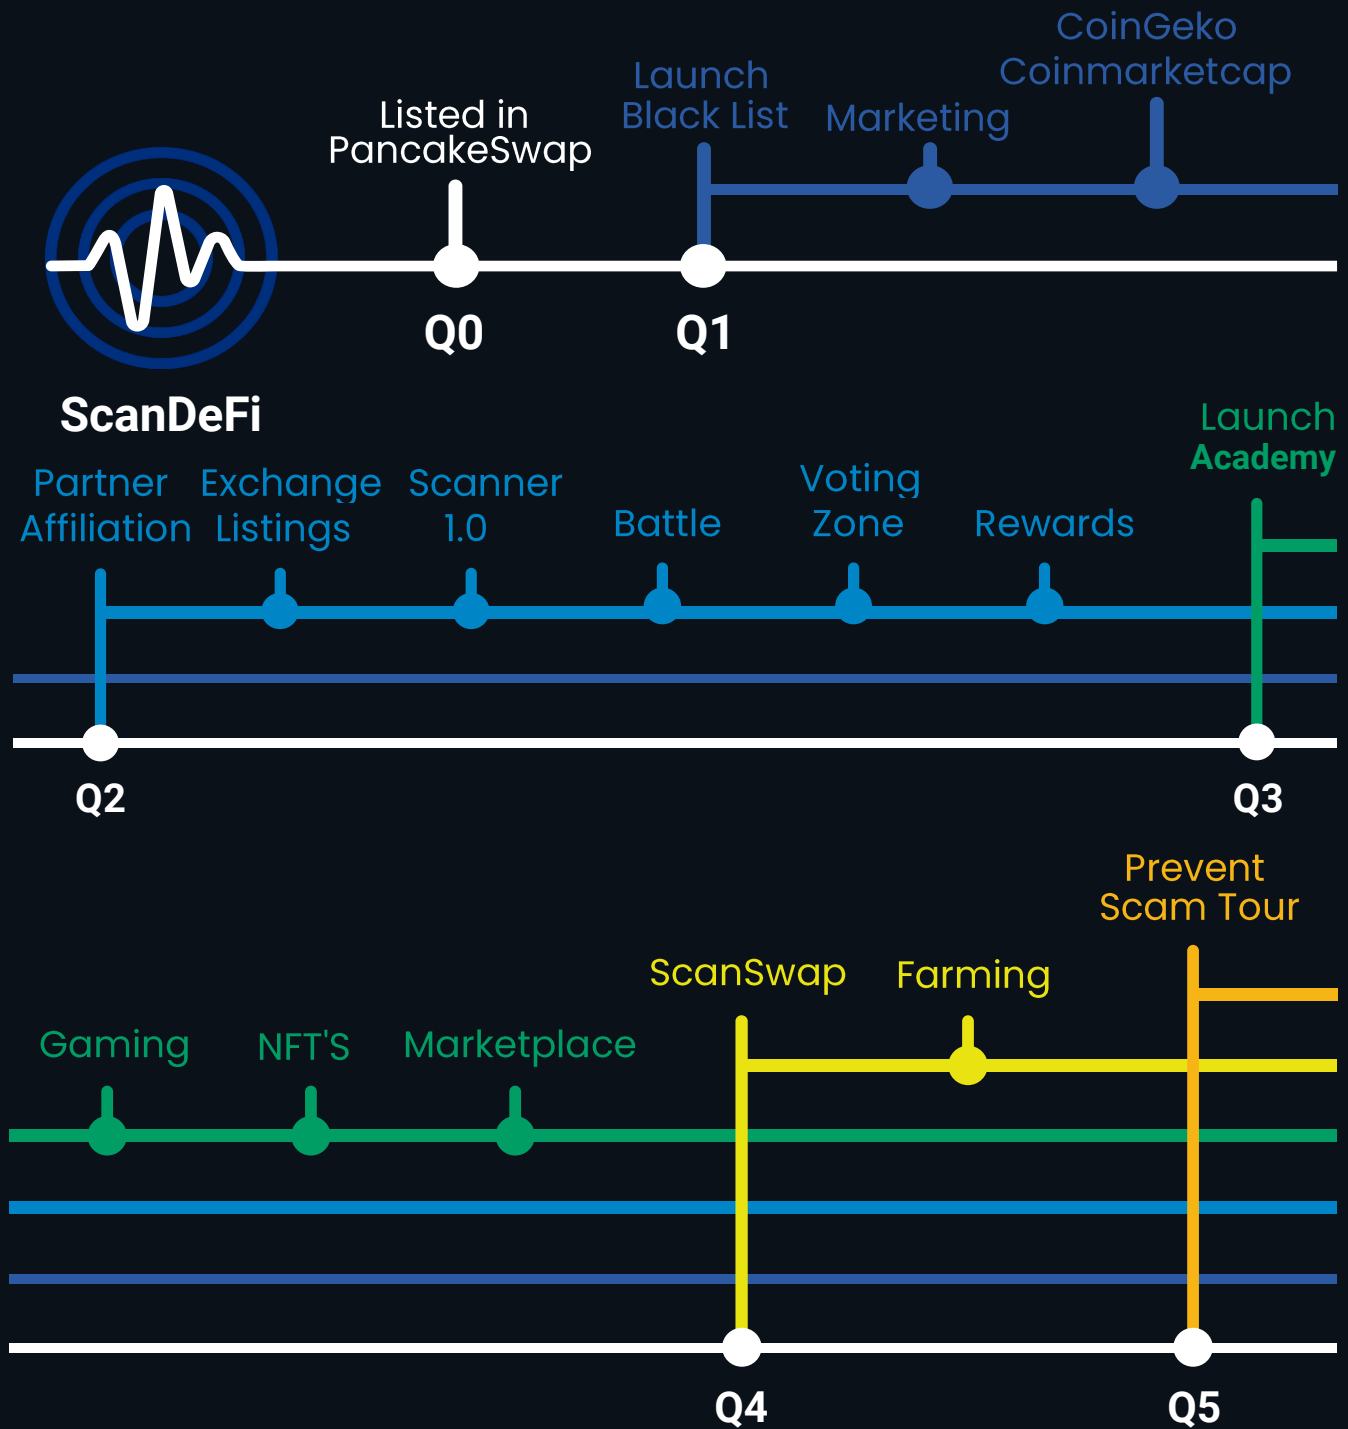

- An automatic system for detecting fraudulent contracts.
- Prevention and citation of fraudulent projects.
- Education and knowledge to be able to individually detect each of these scams.

Scan DeFi Ecosystem

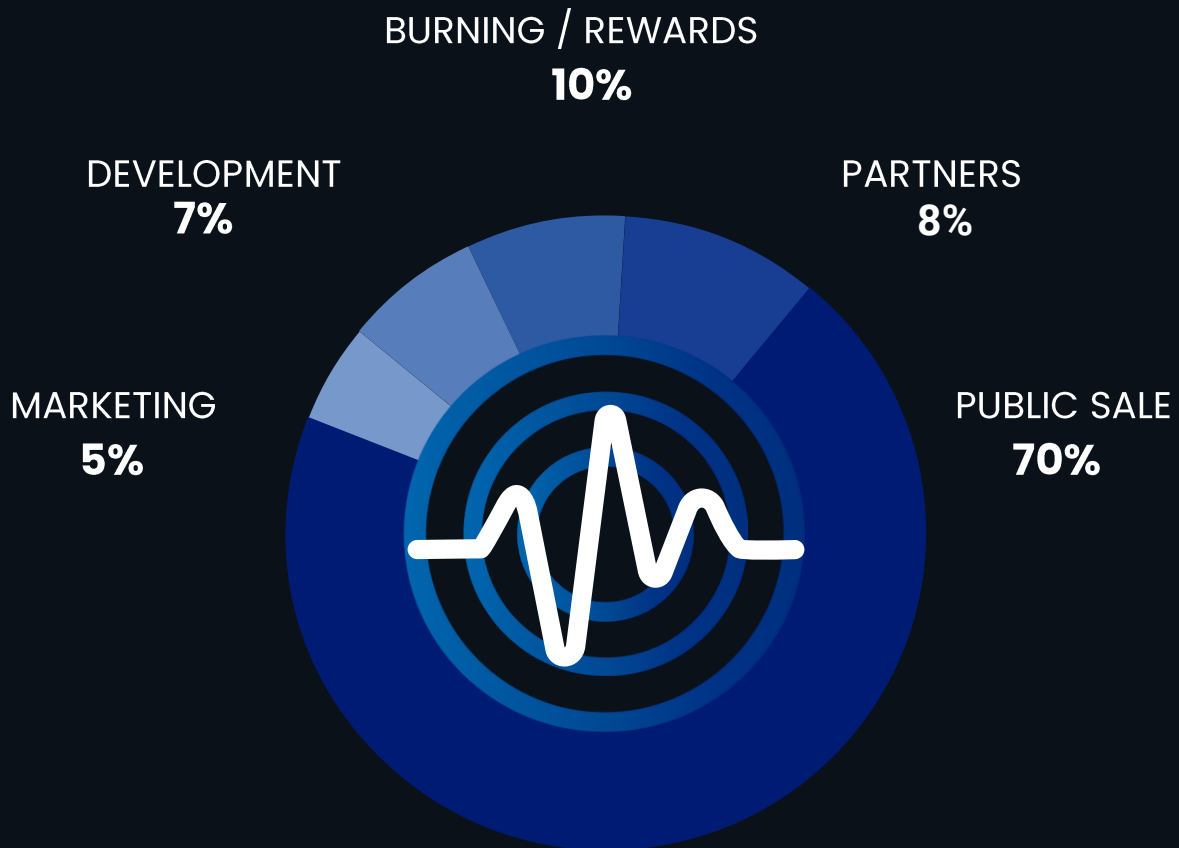

The \$SCAN platform is under development, and once it is operational, there will be access to different areas.

1. **Information area:** In this area we will notify the progress of the project and the doubts that may arise collectively.
2. **Voting area:** In this section you can use our \$SCAN token to vote on important decisions.
3. **Area of education:** A panel created by our experts in smart contracts and the world of blockchain, in which you can learn to detect fraudulent contracts, and prevent fraud at all costs.
4. **Fraud Detector:** An automated system specialized in detecting scams by its contract.
5. **Blacklist:** A section in which there will be reported tokens displayed, using objective and statistical data, verified by prevention experts of fraud on tokens in particular.
6. **Battlefield:** A section in which we will destroy different scammers in the media, thus preventing their expansion and growth.
7. **Wanted area:** In this area our community can interact and battle against the scammers providing us with useful information we need to finish them off.

Areas Explanation

Our platform is mainly composed of 2 fundamental nuclei areas that will carry on the main goal of the project, additionally the \$SCAN team is currently developing 5 more areas to create a most reliable, educational and complete platform. These 7 areas will create a perfect synergy in the platform, and are going to be explained separately for a complete understanding of each section.

Scanner

The scanner is the most ambitious project that the \$SCAN team has and that will provide an excellent tool to battle against scammers. This project is one of the 2 nuclei areas our platform will have.

This consists of a scanner where our community will be able to prove the reliability of a token uploading to our platform its contract, providing us with the characteristics of the token we need to analyse in depth. The scanned characteristics and parameters, relevant features of the token, had been chosen according to a deep research done by the security and cyber delinquency department of our team based on its extensive knowledge and experience in the blockchain area but also based on previous scammers.

According to these relevant characteristics and parameters our platform will return a conclusion with the average risk index that investing on this token will involve.

Blacklist

The Blacklist is the other nuclei area \$SCAN project is based on.

This area has a main goal: Learning of the experience of our community allowing them to report scams they have suffered or detected in order to make these scams public and avoid more people getting stuck in the trap.

The reports will be done in two ways:

- If the reported token has been reported previously, it has to be searched the name of the token on the token searcher and click on report (and optionally add a comment of why the report has been done).
- If the reported token has not been reported previously, it has to be uploaded the contract of the token and optionally add a comment of why the report has been done.

All these reports will be public so people who are thinking of investing on a token they don't completely rely on, can enter in this area and see if this token has been reported previously.

Voting zone

The \$SCAN platform will be provided with a zone where the community can directly interact with the project.

In this zone, people can vote and decide about some features that will happen in the future, concerning the platform or the token itself, like token burns, changes in the appearance of the platform, adding of new functionalities and much more.

Academy

“The best way to avoid a scam is being aware of it.”

In this area our community will be able to learn how to detect and prevent scams by themselves through educational videos and content that our security and cyber delinquency experts will prepare for them.

The academy area will be separated in sections from beginner level, on which can be learned the basic definitions of what characterize a cryptocurrency token, to an advanced level of knowledge, on which our experts will teach you the most advanced and innovative techniques used to properly detect scams.

The platform will be provided with 3 levels of difficulty for all its contents: “Beginner”, “Medium” and “Advanced”.

Wanted

"Four eyes see better than two."

The best way to fight scammers is by fighting strategically and collectively. This is due to the fact that on this part we will launch many different "missions" to our community, a section specially focused on rewarding those holders who are able to provide important information with our \$SCAN tokens.

All this will serve the aim of eliminating scammers from our bullseye.

Battle

"Unity makes strength."

In this section, global and direct actions against scam tokens will be performed. These will be shared to the community by the \$SCAN team, so we can take advantage of the collective strength of the community.

In the "Battlefield" section, we will release detailed reports, arguing the reasons that will explain why it would be necessary to carry out every action. As actions are performed and finished, \$SCAN tokens will be burned as a reward.

Alerts

Alerts will give users important and urgent information so that they can know in every moment of the scammers and will be

given the most important news of every day on the blockchain.

Scanswap

One of the most ambitious ways to prevent scammers is by stopping them from the beginning.

SCANSWAP will be developed with advanced technology in order for the community to operate the net tokens, but with the condition of not being a scam contract.

This creation will bring many changes into the blockchain world against scams.

Gaming

A zone where you can earn \$SCAN playing our own video games and arcades, using our NFTs.

In this zone you will count with great advantages for all of the content creators and gamers that decide to play all the \$SCAN games.

As well, we count on the collaboration of a video game production studio with which we will be in touch to create the best games and give the best advantages and experiences to all of our community and our partners.

NFT'S

Obtain unique NFTs that will be able to be used in the Gaming section to earn more \$SCAN.

Different kinds of NFT'S.

Firstly, we will find unlimited NFTs that will be used in the gaming section, with the goal of increasing profits during the game.

Then, there will be unique and limited NFTs. These can be used as collectibles and upgrades to the staking or farming inside the platform.

Marketplace

The place you will be able to trade your NFTs and upgrade your properties.

As a plus, depending on the time you have been holding SCAN, you will find numerous advantages and discounts in this zone. This doesn't mean that the sellers will receive less NFTs, but they will have financial aid from the platform when they buy each product/ NFT. This way \$SCAN will reward loyalty.

Staking

Earn more \$SCAN by blocking them from being used.

Farming

Earn different tokens by blocking your SCAN and earning tokens inside SCANSWAP.
